LinkedIn | GitHub | Portfolio

SUMMARY

CSE graduate who enjoys turning ideas into working software, with four years of hands-on experience in full-stack web development, computer vision and problem solving. Skilled in Node.js, Express, PostgreSQL, REST APIs, JWT, Python, OpenCV and Java. Strong team player and communicator with analytical thinking, adaptability and time management skills, eager to learn and take ownership. Seeking an entry-level role in software, IT or technology where I can build real products and grow with the team.

SKILLS

Languages	C++, Python, Java, JavaScript, SQL, HTML, CSS
Backend & Databases	Node.js, Express.js, REST APIs, JWT Auth, PostgreSQL
ML & Computer Vision	YOLOv8, YOLO11, OpenCV, TensorFlow, Keras, PyTorch, Librosa
Tools	Git, GitHub, Render, Firebase, NetBeans, PyCharm, MS Office
Core CS	DSA, OOP, DBMS, Operating Systems, Computer Networks, Software Engineering
Security (Basic)	Reconnaissance, SQL Injection, XSS, Acunetix, TryHackMe, Pen-Test Reporting

PROJECTS

Full-Stack Personal Portfolio with Admin Panel GitHub | Live Site

Node.js · Express · PostgreSQL (Neon) · JWT · Render

- Built and deployed a REST API with PostgreSQL storage for profile, projects, skills and contact messages.
- Secured a JWT cookie-authenticated admin panel with login/contact-form rate limiting, honeypot spam protection and validated image uploads.

Face Recognition Attendance System GitHub

Python · OpenCV · Excel

- Built a system that captures faces via webcam, trains a recognizer, identifies people live and logs each person with a timestamp in an Excel attendance sheet.

Employee Management System GitHub

Java Swing · SQL · NetBeans

- Built a Java Swing desktop app with login and dashboard to add, update, remove and view employee records in SQL.

Web Security Practice & Vulnerability Assessment

Acunetix · TryHackMe · SQL Injection · XSS

- Practiced reconnaissance and web vulnerability testing on lab targets; ran Acunetix scans and documented findings in penetration-test style reports.

RESEARCH & THESIS

Test-Time Ensembling Improves Fracture Detection on FracAtlas — Research Paper

YOLOv8s · YOLO11s · Weighted Boxes Fusion

- Goal: make automatic bone fracture detection in X-ray images more accurate and dependable using deep learning and computer vision.
- Combined two YOLO object detection models to get better results than a single model, and checked the dataset for duplicate images to make testing fairer.

Multimodal Emergency Vehicle Detection for Bangladesh — Undergraduate Thesis

YOLOv8 · MFCC · LSTM

- Goal: help ambulances and other emergency vehicles get through traffic faster by detecting them automatically from camera images and siren sound.
- Co-developed a YOLOv8 and MFCC-LSTM siren detection system using a locally collected Sylhet dataset.

ACHIEVEMENTS & ACTIVITIES

- **Competitive Programming:** 338 problems solved and 36 contests on Codeforces (C++) — handle **Nola_The_Great**
- **Hackathon:** Participant, Intra-University Hackathon — SEC CSE Fest 2022, Sylhet Engineering College
- **Leadership:** Workshop Maintenance Coordinator, Executive Committee 2025–2026 — CSE Research Club, SEC
- Attended a campus idea-generation event and a research workshop.

EDUCATION

B.Sc. in Computer Science and Engineering — Sylhet Engineering College · CGPA 3.60 / 4.00 — Feb 2022 – Aug 2026

Higher Secondary Certificate — M.C College · GPA 5.00 / 5.00 — 2018 – 2020

Secondary School Certificate — Blue Bird School and College · GPA 5.00 / 5.00 — 2016 – 2018
